Smart Storage

Spacesaver’s resilient day use lockers solve storage needs without sacrificing design.

By Laura Rote

In a world of open offices, it can be hard to simply find a place to put your stuff. For some, it’s a matter of organization, while for others, it’s all about aesthetics. Fortunately, companies like Spacesaver are evolving their solutions so you can relax, offering options to solve everyone’s needs, starting with day use lockers. “We’re helping employers keep their stuff stored and safe when working in open office environments or offices that have more active design concepts and modular design,” says Katie Lowell, director of marketing for Spacesaver.

Spacesaver has been in the space saving industry for decades, traditionally with high-density mobile shelving. “We’ve been making lockers for the public safety market and military market for years and we’re known for being the best in the industry,” Lowell says. “Taking that same framework without compromising quality or integrity, we simplified and designed for the corporate office environment.”

Make no mistake—these aren’t your traditional storage options. Spacesaver’s day use lockers are integrated into workspaces in a way that’s beautiful—aesthetically pleasing with clean lines. And that’s just the beginning, as the lockers are part of a much larger workspace suite of Spacesaver products. “It’s storage in plain sight,” Lowell says, rather than the storage you might expect in the back of a building. “Often storage is looked at as not ‘sexy’ but bulky, needed but inconvenient. We want to break that perception.”

STORING “STUFF”

Spacesaver CEO Mark Haubenschloid says the 45-year-old Wisconsin-based company continues to respond to people’s needs. “We have to adapt to the new way people want to work,” he says. “They like flexibility, they like options. The products we develop have to help our customers (across markets) retain talent. This is a little way of doing that.” The new,
environments are changing. “The day-use lockers are one aspect of a much larger workspace suite of products,” Lowell says.

The custom storage solutions also allow modern companies to incorporate their corporate brand into the physical setting. The limitless aesthetic options of Spacesaver’s day lockers allow businesses to easily bring their brand and what they stand for into the workplace.

MORE BENEFITS
At the end of the day, Haubenschild says it’s all about maximizing space, removing clutter, and securing your items. Even as Spacesaver has evolved from paper storage to storage for the military and police departments to now more corporate environments, the commitment to efficiency hasn’t changed. They’re still maximizing space, delivering durable products, and making sure there’s no offgassing from paints. It’s all about the environment, minimizing the carbon footprint, and, now, making sure everything looks cool, Haubenschild says. From a design perspective, Lowell says the lockers can be as elegant as you want. “Spacesaver has many beautiful installations across the country—for the Oregon Ducks, Seattle Public Library, and others.”

At the end of the day, Haubenschild says there’s so much to do, and for him, that’s part of the thrill. “We’re more than just mobile storage. We’re reinventing. You have to.”

“We’ve come out on top because we are innovative and willing to adapt and reinvent. You have to.”

But how does Spacesaver know what companies need in the first place? The company focuses on market research, customer feedback, and takes a design-thinking approach when it comes to innovation. Recently, the company hired vertical market thought leaders to work with customers to identify pain points and how they could be solved. “We’re trying to be very proactive. We’re trying to invest in those resources to really understand the markets better than we ever have,” Haubenschild says.

Creative collaboration is key at Spacesaver, and that’s also evolving. Everyone works together—from the product development team to the marketing department to the product managers and the press operator on the shop floor, everyone plays a key role.

“We’ve really changed our culture,” Haubenschild says. “It’s rapid pace, it’s about trying new things.” It’s all about empowerment, he says, not bureaucracy. “We want people to move fast, to iterate, to share their ideas, and be part of it all.”

Haubenschild has been with Spacesaver for 35 years, and his excitement for the industry continues to grow. “I’ve seen this company go from 25 employees to 400 (full-time employees). I’ve seen the market dramatically change from paper storage to stuff storage. I’ve seen a lot of competitors come and go,” he says. “We’ve come out on top because we are innovative and willing to adapt and reinvent. You have to.”

But the day use lockers are just part of it. “There are many storage solutions that we make today and are innovating currently that can be applied with day-use lockers to create a comprehensive workspace solution with modularity and flexibility,” Lowell says. “Yes, it’s not the only new thing Spacesaver has up its sleeve—three more product initiatives are being rolled out in 2018.”

At the end of the day, Haubenschild says there’s so much to do, and for him, that’s part of the thrill. “We’re more than just mobile storage. We’re about customizing solutions in any market for any customer to meet their requirement,” he says. “I still have a lot of passion for it. We’re not even close to being done.”

Spacesaver also builds its products to last. The durable day use lockers are made of heavy gauge steel, with the best hinges money can buy, Haubenschild says.

Security is a big piece of the puzzle as well, as the company is committed to protecting whatever it is you’re storing. “That’s why we have offered different types of lock options to accommodate that—not only aesthetically but for security,” Haubenschild says.

Customers can count on top-notch service long after their purchase, too, with local, certified contractors who can come out anytime should a problem arise. “You have local support and knowledge right in your backyard. They can respond immediately,” Haubenschild says.

CULTURE OF INNOVATION
